

JORDAN LEE

Austin, TX | 555-010-2048 | jordan.lee@example.com | github.com/jordanlee-ai

Professional Summary

Graduate data science student with hands-on experience building agentic AI workflows, LLM-powered applications, and production-grade data pipelines. Skilled in Python (async, FastAPI), LangGraph, Git, and Docker; focused on AI Engineer roles involving autonomous agent design and deployment.

Education

Example University

M.S. in Data Science, GPA 3.85/4.0

Austin, TX

Expected May 2027

State College

B.S. in Computer Science

Dallas, TX

May 2025

Experience

Data Science Research Assistant

Example University Applied AI Lab

August 2025 – Present

Austin, TX

- Developed Python pipelines for feature engineering, model training, and evaluation, including asynchronous FastAPI services supporting agentic AI workflows and LLM-powered applications.
- Built and deployed PyTorch models integrated with LangGraph and FastAPI, enabling semantic search and agentic AI capabilities; contributed to production-grade code with Git version control.
- Created reusable data-validation checks that identified schema drift, missing values, and label inconsistencies before model training.

Software Engineering Intern

Northstar Analytics

May 2025 – August 2025

Dallas, TX

- Implemented FastAPI endpoints and SQL data-access components for an internal analytics platform used by operations teams.
- Containerized services with Docker and added automated tests, reducing deployment-related defects during release validation.

Projects

Resume–Job Matching Agent

Tech Stack: Python, OpenAI API, JSON, LaTeX

2026

Human Resources Technology

- Built an AI agent that ranks portfolio projects against job descriptions, edits marked LaTeX sections, recompiles with pdflatex, and validates a one-page resume output.

Cybersecurity Log Anomaly Detection Agent

Tech Stack: Python, PyTorch, Elasticsearch, Sentence Transformers, LangGraph, FastAPI, Docker

2025

Cybersecurity

- Built a cybersecurity anomaly-detection agent that combined PyTorch models, semantic incident retrieval, and evidence-linked LLM summaries for analyst review.

Document Question–Answering System

Tech Stack: Python, Sentence Transformers, FAISS, FastAPI

2024

Knowledge Management

- Developed a retrieval-augmented question-answering system that used semantic search and source citations to generate grounded responses from technical documents.

Skills

- **Languages:** Python, SQL, JavaScript, Bash
- **ML & Data:** PyTorch, scikit-learn, pandas, NumPy, XGBoost, MLflow, FAISS
- **Systems & Tools:** Git, Docker, FastAPI, PostgreSQL, Linux, REST APIs, LangChain
