

JORDAN LEE

Austin, TX | 555-010-2048 | jordan.lee@example.com | github.com/jordanlee-ai

Professional Summary

Graduate data scientist with hands-on experience in Python-based predictive modeling, data validation, and healthcare analytics. Skilled in building machine learning pipelines, data integrity frameworks, and interactive dashboards using advanced visualization tools. Seeking to leverage expertise in healthcare data science and Oracle systems to optimize operational analytics and revenue cycle management.

Education

Example University

M.S. in Data Science, GPA 3.85/4.0

Austin, TX

Expected May 2027

State College

B.S. in Computer Science

Dallas, TX

May 2025

Experience

Data Science Research Assistant

Example University Applied AI Lab

August 2025 – Present

Austin, TX

- Developed Python pipelines for feature engineering, model training, and evaluation with a focus on data validation and integrity checks to ensure high-quality inputs for predictive healthcare models.
- Built and evaluated machine learning models using PyTorch and scikit-learn, incorporating statistical modeling and time series analysis techniques relevant to healthcare demand forecasting and revenue cycle optimization.
- Created reusable data-validation checks that identified schema drift, missing values, and label inconsistencies before model training.

Software Engineering Intern

Northstar Analytics

May 2025 – August 2025

Dallas, TX

- Implemented FastAPI endpoints and SQL data-access components for an internal analytics platform used by operations teams.
- Containerized services with Docker and added automated tests, reducing deployment-related defects during release validation.

Projects

Hospital Readmission Risk Prediction

Tech Stack: Python, pandas, scikit-learn, LightGBM, MLflow, FastAPI

2026

Healthcare

- Built an explainable hospital-readmission model with a test ROC-AUC of 0.86, tracked experiments in MLflow, and deployed predictions through FastAPI.

Manufacturing Defect Detection System

Tech Stack: Python, PyTorch, OpenCV, Docker

2025

Manufacturing

- Trained a convolutional neural network that classified product defects with 94% accuracy and packaged the inference workflow in a Docker container.

Document Question–Answering System

Tech Stack: Python, Sentence Transformers, FAISS, FastAPI

2024

Knowledge Management

- Developed a retrieval-augmented question-answering system that used semantic search and source citations to generate grounded responses from technical documents.

Skills

- **Languages:** Python, SQL, JavaScript, Bash
- **ML & Data:** PyTorch, scikit-learn, pandas, NumPy, XGBoost, MLflow, FAISS
- **Systems & Tools:** Git, Docker, FastAPI, PostgreSQL, Linux, REST APIs
