

JORDAN LEE

Austin, TX | 555-010-2048 | jordan.lee@example.com | github.com/jordanlee-ai

Professional Summary

Graduate data science student with expertise in artificial intelligence, machine learning, and AI-assisted educational applications. Experienced in developing AI tutoring systems, personalized learning technologies, and student engagement strategies. Skilled in Python, PyTorch, and AI course content development; seeking adjunct faculty roles in AI instruction.

Education

Example University

M.S. in Data Science, GPA 3.85/4.0

Austin, TX

Expected May 2027

State College

B.S. in Computer Science

Dallas, TX

May 2025

Experience

Data Science Research Assistant

August 2025 – Present

Example University Applied AI Lab

Austin, TX

- Developed AI-driven educational pipelines for data processing and model training, supporting adaptive learning and personalized student engagement.
- Created AI models and educational tools using PyTorch and scikit-learn, facilitating interdisciplinary teaching and collaborative learning environments.
- Created reusable data-validation checks that identified schema drift, missing values, and label inconsistencies before model training.

Software Engineering Intern

May 2025 – August 2025

Northstar Analytics

Dallas, TX

- Implemented FastAPI endpoints and SQL data-access components for an internal analytics platform used by operations teams.
- Containerized services with Docker and added automated tests, reducing deployment-related defects during release validation.

Projects

Resume–Job Matching Agent

2026

Tech Stack: Python, OpenAI API, JSON, LaTeX

Human Resources Technology

- Built an AI agent that ranks portfolio projects against job descriptions, edits marked LaTeX sections, recompiles with pdflatex, and validates a one-page resume output.

Adaptive Learning and Tutoring Assistant

2024

Tech Stack: Python, OpenAI API, Sentence Transformers, FAISS, FastAPI, PostgreSQL, React

Education Technology

- Developed an adaptive AI tutoring assistant that combined RAG, student mastery tracking, and personalized practice recommendations grounded in approved course content.

Document Question–Answering System

2024

Tech Stack: Python, Sentence Transformers, FAISS, FastAPI

Knowledge Management

- Developed a retrieval-augmented question-answering system that used semantic search and source citations to generate grounded responses from technical documents.

Skills

- **Languages:** Python, SQL, JavaScript, Bash
- **ML & Data:** PyTorch, scikit-learn, pandas, NumPy, XGBoost, MLflow, FAISS
- **Systems & Tools:** Git, Docker, FastAPI, PostgreSQL, Linux, REST APIs
